Environmental Protection in the Gastronomy

Stadt Erlangen

Umweltschutz

Environmental protection concerns us all!

Waste avoidance is the first priority:

The most effective way is to reduce the amount of waste produced in the first place and thereby the costs for disposing of it. This can be done by using **reusable systems**, **refillable systems** and **bulk quantities**.

Organise your waste disposal system:

It is impossible to avoid creating waste altogether. However, a great deal of waste is recyclable provided it is sorted correctly. As a rule, most waste comes from the kitchen. That is why you should place containers of different colours in the kitchen area and label them accordingly (see page 3).

On request we would be pleased to visit your premises so that we can advise you on your individual needs. Waste advice service: Tel: 86 2784

Save money by saving energy:

Have experts come and assess how you could lower energy costs. For further details ring: 86 2323

Avoidance of noise and smells:

Measures have to be taken in order to avoid conflicts with neighbours on account of noise or smells coming from your premises.

For further details contact: Tel: 86 1515 or 86 2713

Internet: www.erlangen.de under services A-Z/Gaststätten.

Special attention has to be given to the municipal rules and regulations relating to waste disposal and street cleaning:

No food waste in the Biotonne (organic waste collection bin):

Waste containing animal waste (e.g. meat, fish, eggs etc.) and leftover food may not be disposed of in the bin for compostible organic waste. Instead it must be disposed of at an authorized waste disposal site.

The use of disposable cups and plates etc. is not permitted in public areas:

If you sell drinks and food in public areas, you are required to use reusable cutlery and crockery.

What	Examples	Attention!	Where to
Paper Cardboard	office paper catalogues newspapers cardboard packaging advertising leaflets magazines	clean flat(tened)	garbage bin for waste paper
